

## CS3130 Homework 4

Phillip Janowski (pajmc2@mail.umsl.edu)

December 3, 2018

### Question 1.

---

8.2 - 1

Evaluate  $\sum_{k=1}^n \lg k$

Upper Bound  $\lg(n!) = O(n \lg n)$

$\lg(n!) = O(n \lg n)$

$\sum_{k=1}^n \lg k \leq \sum_{k=1}^n \lg n$

$= n \lg n$

Lower Bound  $\lg(n!) = \Omega(n \lg n)$

$\sum_{k=1}^n \lg k = \sum_{k=1}^{n/2} \lg k + \sum_{k=n/2+1}^n \lg k \leq \sum_{k=1}^{n/2} \lg 1 + \sum_{k=n/2+1}^n \lg(n/2)$

$= 0 + n/2 * \lg(n/2)$

$\therefore \lg(n!) = O(n \lg n)$

### Question 2.

---

8.3 - 1

$n!/2$

*All comparison sort algorithms are at worst  $\Omega(n \lg n)$  or  $n!/2 \leq n! \leq r \leq 2h$*

$h \geq \lg(n!/2) = \lg(n!) - 1$

$= \Theta(n \lg n) - 1 = \Theta(n \lg n) = \Theta(n \lg n)$

$= \Theta(n \lg n) - n = \Theta(n \lg n)$

$\therefore$  There is no comparison sort with linear run time for  $n!/2$  of the inputs of array length  $n$

$1/n$

$(1/n) * n! \leq n! \leq r \leq 2^h$

$h \geq \lg(n!/n) = \lg(n!) - \lg n$

$= \Theta(n \lg n) - \lg n = \Theta(n \lg n)$

$\therefore$  There is no comparison sort with linear run time for  $1/n$  of the inputs of array length  $n$

$1/2^n$

$$(1/2^n)n! \leq n! \leq r \leq 2^h$$

$$h \geq \lg(n!/2^n) = \lg(n!) - n$$

$$= \Theta(n \lg n) - n = \Theta(n \lg n)$$

$\therefore$  There is no comparison sort with linear run time for  $1/2^n$  of the inputs of array length  $n$

### Question 3.

---

13.1-1 Inserting 1, 2, 3... 15

Inserting as 8, 4, 12, 2, 6, 10, 14, 1, 3, 5, 7, 9, 11, 13, 15

### Question 4.

---

13.1-2

### Question 5.

---

13.1-4
